

Query your granular data in real-time

Enhance the performance of your existing systems

Make opaque data transparent

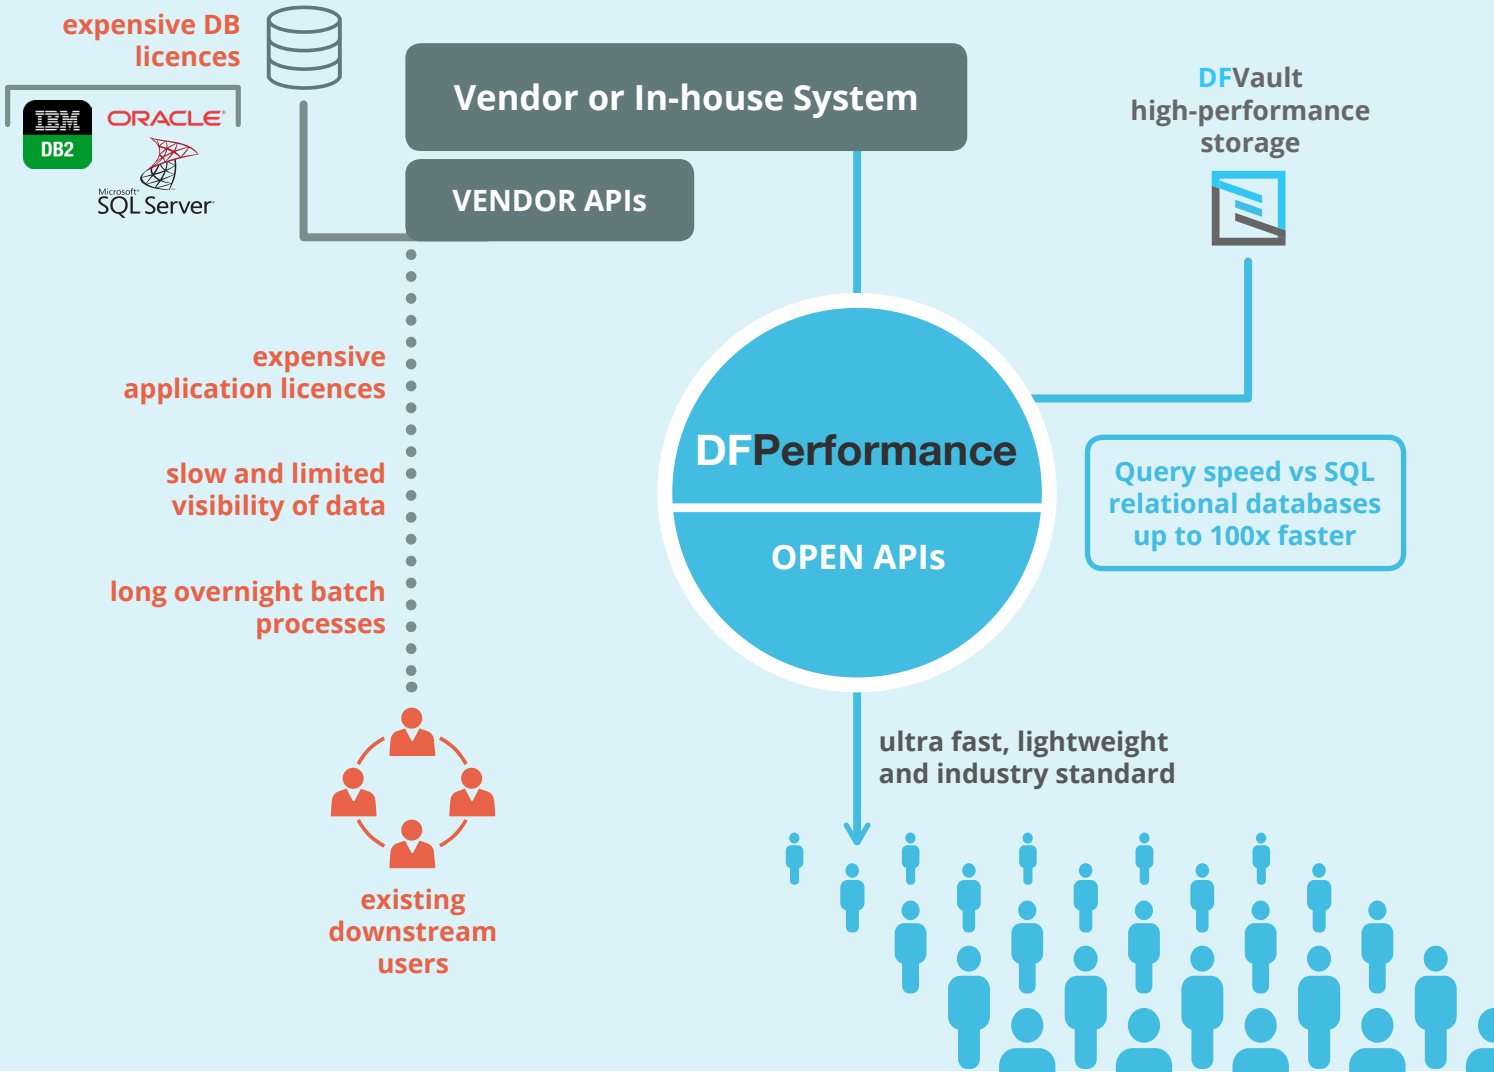

Query any system in SQL

Eliminate need for pre-aggregation

DFPerformance sits in front of your existing systems. Its high performance caching protects, extends and enhances the underlying system preparing it for the digital economy

Leverage your existing technology investment

- Make the opaque data in any system easily accessible to your business users in SQL
- Give your system the headroom to perform critical business processes whilst supporting large numbers of users

Reduce your TCO

- Perform fast database operations on large data sets without purchasing new DB licenses and servers
- Take the load off your system to avoid expensive DB and hardware upgrades

digital economy, many thousands of users
