

Store trillions of structured data records at ultra high speeds

Real-time, streaming and historical data

Ultra efficient use of standard hardware

Easy scale out as volumes grow

## Storing more for less

**Typical compression ratio up to 60x**

## Directly queryable compressed data

DFVault's elegant architecture allows for real-time querying of entire compressed historical data

DFVault's high level of compression greatly reduces storage requirements and increases performance

The minimal storage requirements and ultra efficient utilisation of hardware combine to deliver a lower TCO that fully satisfies business needs

DFVault can dynamically join additional reporting attributes to stored data

DFVault can slice & dice on all attributes including joined attributes

## Revolution in long term storage:

Store all your historical data

## Instant access to all your data:

Remove the constraints of legacy infrastructure

## Large downstream cost reductions:

Avoid expensive infrastructure and licenses

## End the crippling cost spiral:

Stop exponential cost growth
